

Amberon have been working hard to improve the standards of the industry and have recently developed Amberon Passport cards. These ID cards link to Amberon's training records.

Site and Safety competence cards are a crucial part of any contractors Health & Safety requirements. However, what about client or contract specific inductions? What about if there is a delay in receiving an updated card back from the awarding body? What about if there is a paper certificate issued instead of a card? What if the operative has left their latest cards at home?

We have come across all of the above issues over the past 12 months so we decided to do something about it. By incorporating a QR Code on to the front of the card we have created an internet link to our training records that are stored on our server.

A quick scan with any of the multitude of free QR Code Reader Apps takes you straight to the individuals training folder where it possible to view digital copies of all certificates and competency cards held.

We haven't stopped there either. On the reverse of the card is a second QR which contains a data-file with the individuals ICE (In Case of Emergency) details embedded in it. This can be accessed even with no internet signal.

The Amberon Passport is detailed below:

- Company identification card with facial representation and unique number.
- Links to Amberon's server where individuals training records are available to view via a QR code to the front of the card.
- Emergency contact information available as a data-file linked to a QR code on the reverse face of the card.
- A companywide Training Matrix view is also accessible through our newly developed Client Portal.
- All files and folder locations are "read-only" for Data-Protection compliance.
- Greater visibility of training records for all clients and contractors as well as Amberon's internal auditing teams.
- Positive reaction from workforce as recognition that this measure increases site safety.
- Offers reassurance to the public at Gateman positions – shows an openness in who is representing our company and the client.
- Part of "Safe Site Home Tonight" Amberon H&S Campaign for Summer 2016.

"Great use of technology, most of us carry a smartphone and this simple use of a QR card provides a wealth of data and important information. As our customers appetite for more and more information seems to be increasing, making use of this technology can only help our ability to feed this desire."

Gary Mallin, Contract Manager,  
Cheshire East Highways.
